

BULLETS OF FURY

Missing bosses & minibosses

Measured by spawning every stage's miniboss and diffing the frame against one drawn without it. Pixels that change are the unit. All eight currently draw.

THE GAPS

- Stage 3 miniboss - thornrime removed at your instruction.
- Stage 4 miniboss - blacksteel moves to stage 6.

Both gaps are created by the reshuffle. Nothing is broken today.

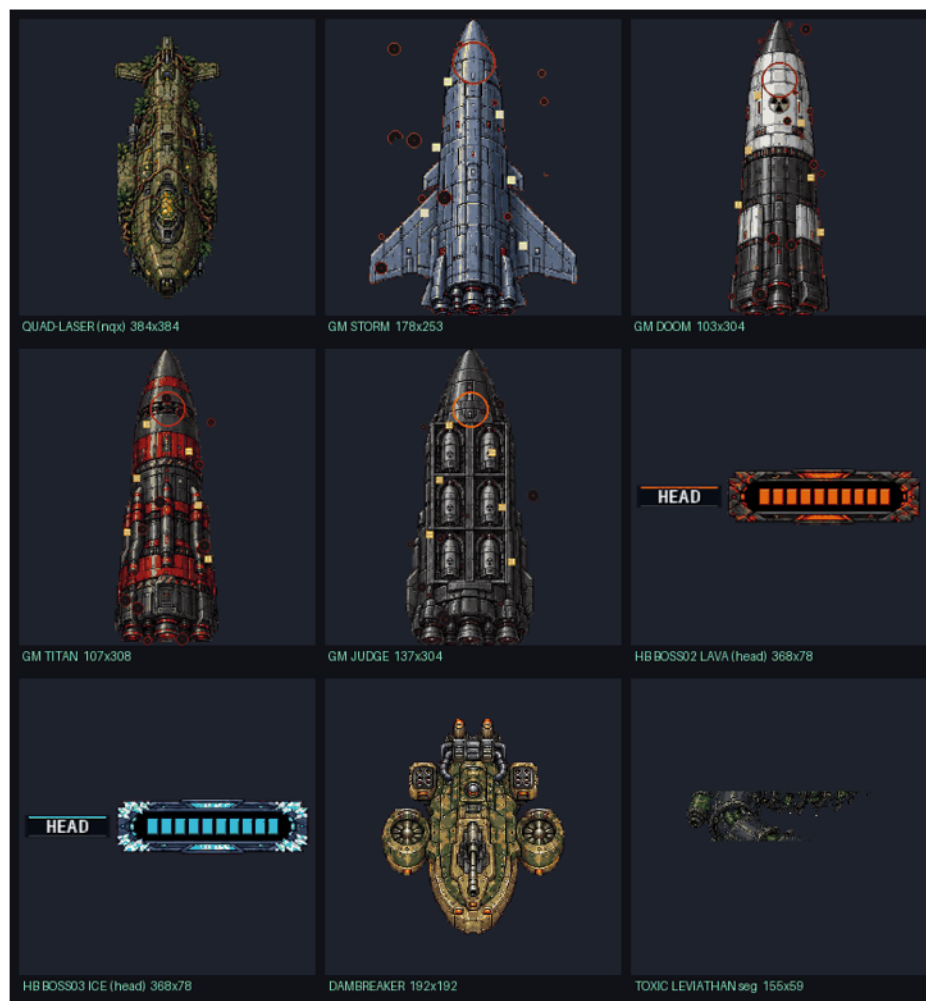

CURRENT STATE (all draw)

STAGE	MINIBOSS	DRAWN PX	BOSS
1	junglecruiser	92,345	damkeeper
2	lavamaw (new)	62,808	infermoreaver
3	thornrime	19,748	cryospear
4	blacksteel	40,684	warhawk
5	subcore	64,088	voidbat
6	olivecarrier	21,727	stormsovereign
7	ratking	100,869	toxicleviathan
8	herald	121,077	vileexistence

CORRECTION: I previously reported stage 8's herald as having no art, citing a source note that its mba_vr_ plates are not in XART. That note is about the herald's ATTACK REEL, which was routed to nev_venom_. The body draws - 121,077 px. There is no third gap.

Available to fill them

Confirmed real art, unused by any stage. Rendered from the art keys directly.

QUAD-LASER 384x384 - the largest unused asset. Four destructible cannons, 22 keys, full BOFQL layout. Built as stage 1's miniboss in 0801em, displaced by jungle cruiser.

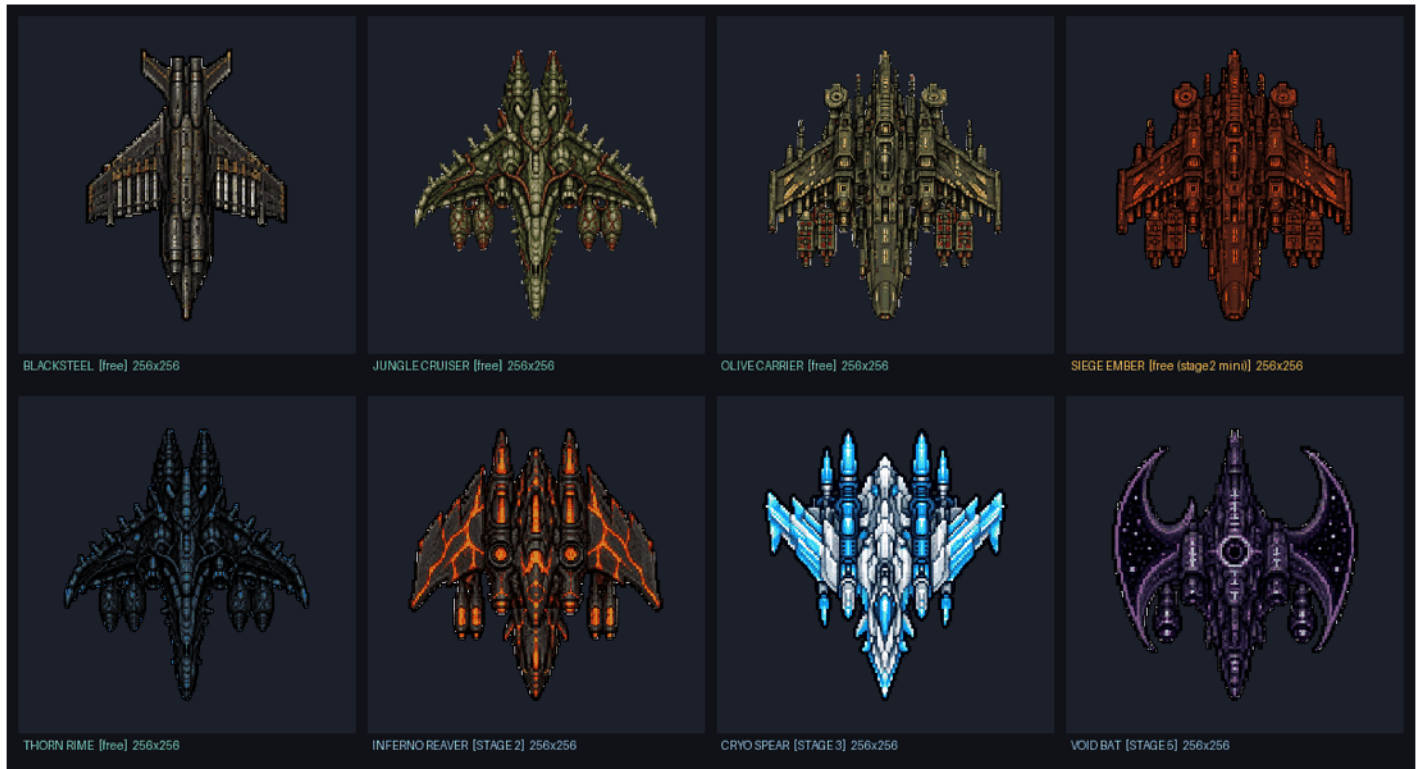

DAMBREAKER 192x192 - olive gunship, four rotors, own thruster and rotor reels.

GM STORM 178x253 - blue-grey delta jet. DOOM / TITAN / JUDGE are tall thin missile bodies carrying red target rings and yellow squares that look like editor annotation markers - check whether those are baked in before using them.

The nhb_boss LAVA and ICE entries are NOT units - they are 368x78 health-bar rigs. Named like bosses, drawn like UI.

The nsb_ family, for reference

All eight are already assigned - five as minibosses, three as stage bosses. None is spare.

Stage 3 is the hard slot: nothing ice-themed is spare. glacierrail was scrapped, thornrime replaced it and is now being removed, and the ICE hit in the art sweep turned out to be a health bar.
